LEGOLAND HOTEL FIRE LANE PAVED WITH DRIVABLE GRASS®!

(April 15, 2013 – CARLSBAD, CA) - Legoland California, owned by Merlin Entertainment, the 2nd largest theme park company in the world, opened the nation's first Lego-themed hotel on Friday, April 5th, 2013 in Carlsbad, CA.

Delawie Wilkes Rodriguez Barker Architects designed the hotel and R W Apel was the Landscape Architect.

Drivable Grass® was the product of choice for the emergency Fire Access Lane.

Irri'scape Construction installed 13,680 sq. ft. of the permeable, flexible and plantable concrete pavement system. The Drivable Grass® was planted with a hydroseed application of Dwarf Fescue to get the desired full grass look.

Drivable Grass® has been approved and installed on numerous fire lanes, parking lots, and driveways throughout California and the nation, and has been field tested to prove the use.

For further information and details about Soil Retention's Plantable concrete systems® including Verdura®, Drivable Grass®, and Enviroflex® visit our web site at www.soilretention.com or contact us at 800-346-7995.
